

Case Study**Tesco**

TILLING ROAD, CRICKLEWOOD, LONDON, NW2 1LZ

**Client**

Sovereign Construction Limited is a leading UK based commercial building contractor providing project management and construction services to the retail and commercial sectors. Established in 1971 they have worked continually with major retail operators, such as Tesco, Specsavers, Abbey/Santander and Pret A Manger, together with many other high street names.

Project

Our client was instructed to carry out internal and external refurbishment works, which formed part of the upgrade project at the Tesco branch. Within their scope of works redecorating and cleaning the high level pillar/beam structures to the front and side elevations was high on their priority list.

These pillars and beams are perfect perching, nesting and roosting structures for most pest bird species, which meant the canopy was already netted with old and grimy nets. As a result this prevented the contractor from gaining access to the metal structures in question.

“Safeguard provided our client with a first class job right through from the initial site survey to the completion of the netting project. Their staff, both on and off site, were fantastic, which resulted in the work going through without a hitch and coming in on time. I would have no hesitation in recommending Safeguard for any pest control project”

Director

Case Study

The Solution

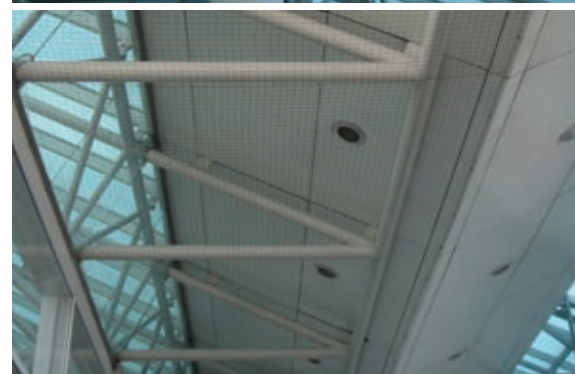

Observations

During our initial site inspection we noticed that the existing netting was damaged in several areas and was leaving gaps between the net and structure. Therefore all existing netting from the entire canopy by the main entrance and around the trolley and loading bays had to be removed and replaced.

Due to the location of the works and the store being open 24hours, most of our installation was carried out during non-business hours. In order to meet the deadline of the store handover we scheduled the works to be carried out over the weekend as well as evening shifts.

Completion

Safeguard assigned a two man team to complete the works over six shifts. Several types of access equipment were used to ensure the works were carried out in a safe manner. In total we installed over 600m² of new black pigeon netting, which has a mesh size of 50mm
